

# CHUAN WEN

E-mail: cwen20@mails.tsinghua.edu.cn ◊ Homepage: <https://alvinwen428.github.io>

## EDUCATION

---

### Tsinghua University

*Sep. 2020 - Present*

Institute for Interdisciplinary Information Sciences

Ph.D student in Computer Science, advised by Prof. Yang Gao

### UC Berkeley

*Sep. 2023 - Apr. 2024*

Berkeley AI Research (BAIR)

Visiting scholar in Computer Science, advised by Prof. Pieter Abbeel

### Shanghai Jiao Tong University

*Sep. 2016 - Jun. 2020*

School of Electronic Information and Electricity Engineering

B.S. in Information Engineering (Graduate with honor)

## AREAS OF INTERESTS

---

The robustness and sample efficiency of embodied AI, especially robotics manipulation and locomotion.

## PREPRINTS

---

[1] Fanqi Lin, Yingdong Hu, Pingyue Sheng, **Chuan Wen**, Jiacheng You, Yang Gao. Data Scaling Laws in Imitation Learning for Robotic Manipulation.

## PUBLICATION

---

## EXPERIENCES

---

**Visiting Scholar, Robot Learning Lab, UC Berkeley BAIR***Sep. 2023 - Apr. 2024*

- *Supervisor: Prof. Pieter Abbeel, Dr. Xingyu Lin*
- We study to boost the generalization performance of robotics tasks with vision foundation models.

**Research Assistant, EVAR Lab, Tsinghua University***Sep. 2020 - Now*

- *Supervisors: Prof. Yang Gao, Prof. Dinesh Jayaraman*
- We study the robustness and safety of the current Deep Neural Networks, especially in the computer vision and policy learning areas. Motivated by the Causal Inference literature, we aim to propose unbiased learning algorithms to help the DNNs learn the causally correct logic and avoid the spurious correlations or shortcut solutions.

**Research Intern, Vision Group, UC Berkeley BAIR***Aug. 2019 - Aug. 2020*

- *Supervisors: Prof. Trevor Darrell, Prof. Yang Gao*
- In POMDP, a common instance of causal confusion occurs when expert actions are strongly correlated over time: the imitator learns to cheat by predicting the expert's previous action. To combat this "copycat problem", we propose an adversarial approach to learn a feature representation that removes excess information about the previous expert action nuisance correlate.

**Research Intern, Turing Sense***Jan. 2019 - Jul. 2019*

- *Supervisor: Prof. Pingzhong Tang*
- I am in charge of developing fine-grained and unbiased visual classification algorithms for the APP identifying the authenticity of luxuries bags, shoes and watches.

**Research Assistant, Cooperative Medianet Innovation Center, SJTU** *Aug. 2018 - Nov. 2020*

- *Supervisors: Prof. Ya Zhang, Prof. Siheng Chen*
- We study Deep Generative Models for the handwritten Chinese Font style transfer task. By integrating the deep convolutional networks with traditional morphological Transformations, we propose a Chinese Font style transfer model consisting of three modules: collaborative stroke refinement, online zoom augmentation and adaptive deformation. The proposed method achieves SOTA fewshot performance with only 750 training samples.

**Research Assistant, Intelligent Internet of Things Lab, SJTU***May 2018 - Sep. 2018*

- *Supervisors: Prof. Xinbing Wang, Prof. Weinan Zhang*
- We construct a large-scale academic knowledge graph AceKG, supported by Acemap. It includes 114.30 million academic entities based on a consistent ontology.
- Based on AceKG, we study an author name disambiguation algorithm (named *AND*) for the system to distinguish the papers written by the authors with the same names. The algorithm is based on GraphGAN and self-training paradigm.
- We develop a knowledge-base QA system for AceKG, and propose an algorithm named *RI-SSGE* to transform the natural language to SPARQL Query for AceKG system, which combines rule inference and sentence schema graph embedding.

**HONORS & AWARDS**

---

ByteDance Scholarship (Top 15 around China and Singapore)	<i>2024</i>
Toyota Scholarship	<i>2021</i>
Outstanding Graduates	<i>2020</i>

**OTHERS**

---

**Reviewer Service**    NeurIPS, ICLR, ICML, CVPR, ICCV, ECCV, RA-L, WACV.
